

Service Workshops

Excellent Support: MAN PrimeServ

MAN PrimeServ offers you excellent support all over the world, availability through a global network of service headquarters and an increasing number of local service centers to satisfy our customers' requests. We provide top quality spare parts – that only an Original Equipment Manufacturer can provide: from tailored operations and services such as maintenance contracts to personal support. *Wherever, Whenever.*

MAN PrimeServ means that we offer a complete range of global services including repairs, consulting, service of machines and complete turbomachinery trains (compressors, gearboxes, pumps and turbines) and consultancy service for operations, preventive maintenance and troubleshooting. Overhauls, repairs and modernization of turbines and compressors are done by our experts according to state-of-the-art technology. The supply of spare parts and priority access to technical support, a broad variety of service contracts, emissions service (to ensure your machines comply with the latest environmental legislation); technical service teams: we offer and perform according to optimal effectiveness and reliability.

Your requirements are always considered, additionally we meet schedules and MAN PrimeServ quality standards and procedures. We are always close to you and deliver outstanding service in order to improve your competitiveness – please have a look at the world map inside.

Argentina

Keeping the needs of our customers at the pivot, we always strive to provide services that are prompt and according to the latest state-of-the-art technology. The service workshop offers a wide range of services, ranging from normal inspections to complete overhauls, repairs and modernizations. These MAN PrimeServ services are always performed by our highly qualified local engineers and field service staff.

Service

- inspection and condition evaluation
- spare parts supplies
- rotating equipment repair and reblading
- casing and stator repair
- overhaul and retrofit of control panels
- technical consulting
- field service

Service capacities

- cleaning and NDT
- lathes and vertical milling machines
- boring and milling machines
- horizontal milling machines
- electrical run out equipment
- low speed balancing
- TIG welding, heat treatment
- metal spray facility
- assembly
